

SSS SIEDLE

Watchful
on the outside.

Convenient
on the inside.

Siedle video
systems.

Diversity at the door.

Hearing is good. Seeing is safer. Better than asking "Who is it?" is the certainty of seeing with your own eyes. Unlike a conventional intercom, video surveillance provides a significant increase in security and comfort. Better still if it can be as flexibly integrated and designed as with the Siedle systems.

On the wall, in the wall or free-standing? In aluminium, brass or stainless steel? One design at the main entrance, another at the side entrance? The video door stations in the Classic, Vario and Steel design lines give you the choice. They cover every conceivable function at entrances, including letterbox, access control or lighting.

Siedle Classic

Siedle Vario

Diversity in focus.

Three camera models are available for the Classic, Vario and Steel systems.

180°: with an all-round view from wall to wall – a solution when conditions rule out optimum positioning of the camera.

130°: the best combination of excellent night vision, brilliant picture quality and a wide viewing angle.

80°: a direct view forwards that can also be mechanically adjusted is quite adequate in many situations.

Diversity at the door.

Hearing is good. Seeing is safer. Better than asking "Who is it?" is the certainty of seeing with your own eyes. Unlike a conventional intercom, video surveillance provides a significant increase in security and comfort. Better still if it can be as flexibly integrated and designed as with the Siedle systems.

Siedle Classic

Siedle Vario

Siedle Steel

Diversity indoors.

Video panels

To satisfy the highest demands on image rendition: the video panels display the door image on a monitor with a 17.8-centimetre (7-inch) display diagonal. The simple, safe operation and enormous range of individual designs are typical Siedle features.

In-house and handsfree telephones
Look at the image, talk, open the door – either with a receiver or handsfree, mounted on the wall or in a table-top version. Its clear design ensures intuitive operation.

Virtual in-house telephone
The virtual in-house telephone turns a PC-based control panel or computer into a call station for door communication – including video presentation and door release.

Siedle app

The Siedle app makes an iPhone or iPad into a mobile extension of your door communication system. It receives the door call, displays a live video image, establishes a voice connection and opens the door. But of course it also features integrated security and maximum convenience, such as an image memory.

Siedle Scope

Siedle Scope is the mobile communication device to suit a wide range of demands. Wherever you are, whether in the kitchen, the bathroom, the garden ..., Siedle Scope gives you a live update of who is standing at the door. You can also use Scope for phone calls, making it a single device for all your communication needs. And finally Scope can connect to the world of iPads and iPhones, too, as the Siedle app can also be used with Scope.

Inside and outside: individually customized.
